

A Recognized Leader

CP Control Technologies is recognized as a leader in delivering complex process control solutions in the **agricultural, mining, wastewater, water** and **utilities** industries. We are one of the fastest growing industrial process controls groups in the United States. We offer a wide range of technical services including design, development, management, training, operations and support of industrial process control systems.

Unbeatable Service

Our reputation for service and support in our industry is unbeatable. We offer knowledge and experience that is invaluable to customers trying to meet difficult state and federal regulatory requirements in their organizations. Most importantly we form long lasting relationships with our customers bringing value to today's process control challenges by offering creative and powerful automation solutions.

Striving for Excellence

CP Control Technologies continues to strive for excellence by investing in our diverse and competent staff. We are committed to obtaining the training, education and certifications to keep up with the demanding pace of technology and growth in today's industries. This allows us to offer our customers the service and support they deserve. Simply put, we employ and offer the most skilled staff in the industry.

Diverse Experience

Our staff consists of a wide range of talented individuals with education, experience and certifications in process controls engineering, water and wastewater operations, regulatory compliance, instrumentation systems engineering, electrical control systems engineering, database management, computer information systems management, PLC programming, HMI design, Project Management, SCADA system design and implementation and Systems Integration.
